

Final Business Insights Report

Sales Analysis Dashboard

Project Overview

The objective of this project is to analyze sales performance using SQL, Excel, and Power BI. The dashboard helps identify key business trends, top performing products, profitable categories, customer behavior, and regional performance to support better business decisions.

Dataset Overview

The dataset contains sales transaction data including

- Orders
- Sales
- Profit
- Discount
- Product Category
- Customer Details
- Market
- Region
- Order Date

The data was cleaned and analyzed before creating the dashboard.

Key Findings

1. Sales Performance

- Total Sales exceeded 13 Million.
- More than 25000 orders were processed.
- Overall business generated approximately 1.47 Million profit.

2. Regional Analysis

- Some regions generated significantly higher sales than others.
- Regional analysis and low-performing markets.

3. Market Performance

- APAC and EU markets contributed a major share of total sales.
- Smaller markets require additional business attention.

4. Customer Insights

- A small group of customers generated a significant portion of total sales.
- These customers can be targeted through loyalty and retention programs.

5. Category and Segment Analysis

- Different product categories contributed differently to profit.
- Consumer segment generated the highest business contribution.

Business Recommendations

- Focus marketing efforts on high-performing regions.
- Increase inventory for top-selling products.
- Improve performance in low-performing markets.
- Offer personalized promotions for valuable customers.
- Optimize discounts to improve profitability.

Tools Used

- Microsoft Excel
- SQL
- Power BI

Conclusion

This dashboard provides a comprehensive view of sales performance and customer insights. The analysis enables data-driven decision making and helps improve profitability, customer retention, and business growth.
